

Supplier: VEND-YORK | Target Equipment EQ-CHILL-202

This submittal addresses requirements REQ-CHILL-001, REQ-CHILL-002 and REQ-CHILL-003.

Performance Parameters: Chilled water temperature output comfortably meets the 7.2C design target under full load.

Compressor fan load logs from bench testing show a peak power draw of 52 kW recorded during sustained heavy-load operation.

Redundancy Note: Standard factory configuration ships as a single N unit. N+1 concurrent redundancy is available as a field-installed upgrade module at additional cost and lead time, and is not included in the base offer.

Note: Structural anchoring hardware is included in the standard shipment manifest.
